Instana product offering

One solution - two product offering components at the licensing level:

- **Distributed**
 - Platforms: x86, IBM Power, Linux on IBM z, cloud native
 - Products:
 - IBM Instana Observability Standard Self-Hosted (on-prem)
 - IBM Instana Observability Standard (SaaS)
 - IBM Instana Observability Essentials **Self-Hosted** (on-prem)
 - IBM Instana Observability Essentials (SaaS)
 - Quote & Order based on DSW part numbers – all found in SQO
- **Mainframe (native z/OS)**
 - Product: IBM Observability by Instana APM on z/OS
 - PID for license: 5698-5A1
 - PID for S&S: 5698-5A2
 - Quote & Order based on ESW PID numbers
 - All Instana APM on z/OS opportunities require both the distributed and the mainframe products

IBM Observability by Instana on z/OS

Licensing facts

- IBM Observability by Instana on z/OS is **licensed by what it is monitoring**
 - On distributed platforms – count of VM's or Kubernetes Worker Nodes
 - On z/OS – total MSU's of the LPARs on which Instana does any monitoring
- Distributed Instana is not licensed or entitled for monitoring of z/OS workloads
- z/OS Instana is not licensed or entitled for monitoring of distributed workloads
- You **must sell both** Instana on z/OS and Instana distributed to ensure entitlement for the usage scenarios we support
- Selling z APM Connect does not convey Instana entitlement to act on the tracing data that it captures

Instana on distributed platforms

Introducing Instana Fair Use Policy for SaaS

IBM is introducing a fair use policy statement to Instana on July 2nd, 2024.

Previously, an Instana Managed Virtual Server (MVS) license included unlimited data. However, not all clients are the same, and due to advances in technology and to ensure exceptional performance for every client, we are setting a data-ingest-based fair-use policy for Instana's MVS model.

Why offer Observability Essentials? Why not just
Observability Standard? Details [here](#)

Part Number	Description	Price (per MVS/month)	Fair Use Budget
D0N79ZX	IBM Instana Observability Standard (Formerly known as APM)	\$US 79.50	325 GB Data-Ingest Budget per MVS per month
D0N77ZX	IBM Instana Observability Essentials (Formerly known as IQM)	\$US 21.20	50 GB Data-Ingest Budget per MVS per month
D0N7BZX	IBM Instana Observability Add-on Data ingest 100 Gigabytes per Month	\$US 0.212 per GB data-ingest	
D0N7CZX	IBM Instana Observability Data ingest On Demand Gigabyte Pay per Use (data ingest overage)	\$0.27 per GB data-ingest	
D0N78ZX D0N7AZX	IBM Instana Observability Essentials Managed Virtual Server - Hour Pay per Use IBM Instana Observability Standard Managed Virtual Server - Hour Pay per Use (MVS overage)	\$0.03 Per Essential MVS \$0.13 Per Standard MVS	

Part Number	Description	Price (per MVS/month)
D29RTL	IBM Instana Observability Standard Self-Hosted Managed Virtual Server Subscription License	\$US 120.00 (includes S&S)
D29RRL	IBM Instana Observability Essentials Managed Virtual Server Subscription License	\$US 32.10 (includes S&S)
D29RULL	IBM Instana Observability Standard Self-Hosted for Linux on IBM Z Managed Virtual Server Subscription License	\$US 120.00 (includes S&S)
D29RSLL	IBM Instana Observability Essentials for Linux on IBM Z Managed Virtual Server Subscription License	\$US 32.10 (includes S&S)

IBM Instana Observability –Old Part Number Mapping

Old Part Number	Description	Corresponding new part number	Description
D04Y0ZX	IBM INSTANA OBSERVABILITY MANAGED VIRTUAL SERVER PER MONTH	D0N79ZX	IBM Instana Observability Standard (Formerly known as APM)
D04Y1ZX	IBM INSTANA OBSERVABILITY MANAGED VIRTUAL SERVER OVERAGE	D0N7AZX	IBM Instana Observability Standard Managed Virtual Server - Hour Pay per Use (MVS overage)
D04Y2ZX	IBM OBSERVABILITY BY INSTANA INFRASTRUCTURE QUALITY MONITORING SAAS MANAGED VIRTUAL SERVER PER MONTH	D0N77ZX	IBM Instana Observability Essentials (Formerly known as IQM)
D04Y3ZX	IBM OBSERVABILITY BY INSTANA INFRASTRUCTURE QUALITY MONITORING SAAS MANAGED VIRTUAL SERVER OVERAGE	D0N78ZX	IBM Instana Observability Essentials Managed Virtual Server - Hour Pay per Use
		D0N7BZX	IBM Instana Observability Add-on Data ingest 100 Gigabytes per Month

Licensing Hypervisor Scenarios

- If Licensee Is using Instana to monitor a Hypervisor environment (such as VMware VSphere or PowerVM), Licensee must acquire one Managed Virtual Server for each monitored virtual machine (for example, VMWare virtual machines or PowerVM LPARs). Specifically, this means a Managed Virtual Server entitlement must be acquired for each Instana agent that is installed on a virtual machine. Licensee must acquire an Observability Standards (formerly known as APM) or Observability Essentials (formerly IQM) Managed Virtual Server entitlement, as applicable and dependent on whether Standard or Essentials is enabled on the agent.
- If no agent is installed, for any virtual machine where virtual machine metrics are collected via the Hypervisor, Licensee must acquire an Observability Essentials (formerly IQM) Managed Virtual Server entitlement. Licensee may choose to disable the collection of virtual machine metrics in Hypervisor environments, and in which case, additional entitlements of Instana Observability Essentials (formerly IQM) are not required. Licensee may also configure the Hypervisor environment to monitor a subset of virtual machines, and in which case, only the virtual machines being monitored via the Hypervisor environment require entitlements.
- For the sake of clarity, in a VMWare environment, neither the vCenter itself, the ESXi servers, nor other Hypervisor Manager (such as PowerVM Hardware Management Console (HMC)) as a physical server itself requires entitlements to the Program.

What is available for Sales?

- Registering an Opportunity in ISC:

Part number	Quantity/Include	Part description	SFP price
D04Y12X	200	IBM Observability with Instana Application Performance Monitoring SaaS Managed Virtual Server per Month Billing frequency: Annual Add: 0 - ramp up periods	75.00 \$0.00

IBM Instana Observability – Clients feeding existing Monitoring data

With a minimum order of 50 Instana Observability Standard licenses:

- Customers can use the bridge that allows metric data from existing monitoring (ITMs, ITCAMs, SmartCloud, APM v8, ICAM, CP4MCM) to be fed into *IBM Instana Observability*
- There is **no additional charge** to connect the existing Monitoring environment to the Instana observability platform for this scenario. S&S on the existing must be maintained
- An Instana license **is required, per server** if the customer wants to enrich that data with Instana Observability Standard capabilities (eg, tracing, CI/CD monitoring, EUM, analytics)
- This is intended to help customers adopt Instana, and protect their previous investments as they adopt and transition to Instana
- Review the “*Move the base forward*” Sales Motion in place to help provide the best pricing option for clients to transition from IBM monitoring solutions to Instana.
 - [Link](#) to the Sales Motion details.

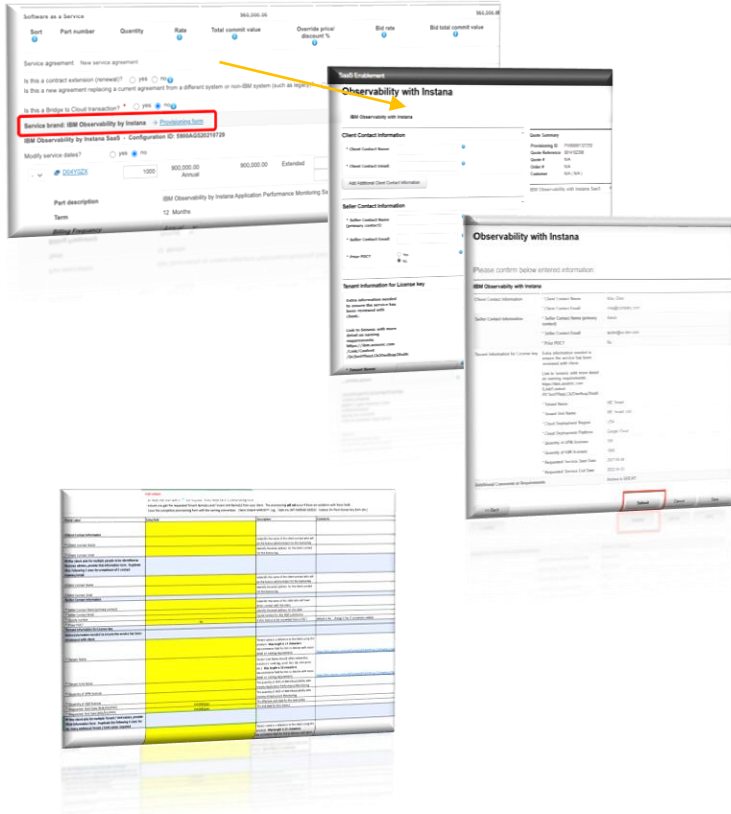

IBM Instana Observability— Serverless monitoring guidelines

How to price for Serverless environments:

- For monitoring of a 100% serverless environment, the quantity to order is 50 MVS of Instana Observability Standard
- For a deal where there is a combination of both serverless and non-serverless resources to be monitored:
 - If the quantity of non-serverless resources is more than 50, then there is **no additional charge** for the serverless monitoring.
 - If the quantity for non-serverless resources is less than 50 MVS, you **quote 50 MVS total**
 - For any exceptions, please reach out to Jordy Mevissen (WW Sales Lead Instana)

IBM Instana Observability – Submitting the Order

- SaaS

- Integrated Provisioning Form – must be submitted with the order
- Key fields – Tenant & Tenant Unit names
 - Guidance on choosing the names: [link](#)
- Contact Product Managers if help needed to complete the provisioning form
- Note: the SaaS subscription will not be provisioned until the provisioning form is completed
 - Seller name required in case there are issues with the Tenant/Tenant Unit names

- Subscription License

- Temporary key included in PPA eAssembly download
- Permanent key is based on Tenant & Tenant Unit names
- Download License Key creation form from Seismic – [link](#)
 - Guidance doc for choosing tenant/unit names: [link](#)
- **Note:** the permanent license key will not be sent to the client until the License Key creation form is received
 - Sales Operations will reach out to the seller to get the form
 - Seller will have to contact client if there are issues with the Tenant/Tenant Unit names

IBM Instana Observability – Pricing / Quoting

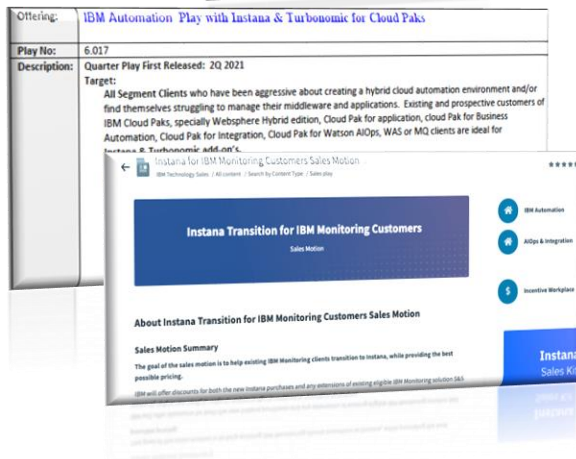

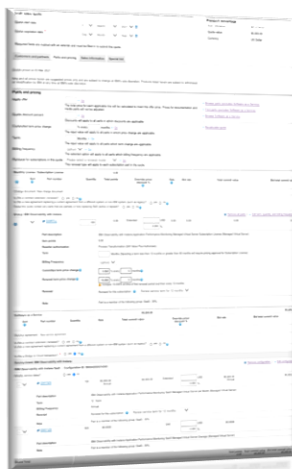

- Discounting guidance when putting quote together
 - The Instana part numbers are already market / ‘street’ priced, so any proposed discounting must take this into consideration
 - Based on quantities ordered, a range of 0 – 30% is appropriate
 - Reach out to Pricing or Prod Management for help, if needed
 - For guidance in more complicated proposals, reach out to the **Instana Sales Motion** for help. [Link to details.](#)
- Pricing Plays & Incentives available now
 - ✓ Use Pricing Play [6.49](#) (Competitive Pricing Play)
 - Provides potential discounting for competitive opportunities
 - Minimum 1 year commitment
 - ✓ Alternatively, for net new logos, consider NEW Pricing Play [1.14](#) (New IBM Clients and Brand Logos)

[Click here for Distributed Software Pricing Plays \(Pricing Delegation Repository\)](#)

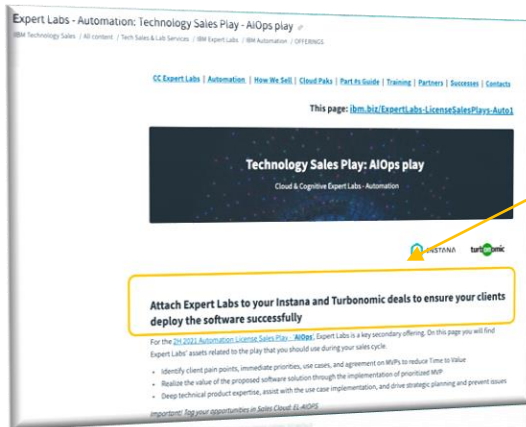

BU = Software, GEO = WW, Area of interest = Pricing Plays

- ✓ Transition to Instana – Sales Motion
 - Provide Instana to existing IBM APM / CP4MCM customers for the management of their new cloud development

IBM Instana Business Monitoring

No longer sold as add-on but included into Standard

(Announced: July 11, 2023)

Extending Observability to business processes

<https://ibm.seismic.com/Link/Content/DCCPWR8hmFDR48MJCQfH3gV63g8j>

Top Details to Know

IBM Business Monitoring an automated solution designed to provide organizations with an **end-to-end view** of their business processes and applications. It enables teams to **proactively monitor** business KPIs without having to wait for reactive reports. This solution provides **automatic** and continuous **detection** of running processes executing in Business Automation (BA) tools.

Addresses Common Client Pain Points

- Connects business and IT context by observing business processes in the context of their logical and physical dependencies across mobile, web, applications, and infrastructure.
- Removal of any IT roadblocks and reduction of outage costs.
- Understanding the business processes with IT metrics to better identify the cause of issues.

Purchasing Options

- Add-on that is priced as a premium over Instana APM
- Pricing Metric is MVS.
- Initially available as SaaS only
- Target for on-premise in 4Q: Enables rapid feedback, update and co-development cycles with initial adopters.

What does it do?

- **Automatically detect running business processes** without requiring complex instrumentation streamlining the process of exporting crucial data to existing IT tools.
- **Capture 100% of trace data** without sampling and monitor business KPIs without having to wait for others to reactively provide reports.
- **Track business processes** end-to-end through the IT stack with exportable data sources to help bridge the gap between business and IT events.

Use Cases

- An IT incident impacts an endpoint that supports a business process, Instana will show that incident in context of the business process.
- Use unbounded analytics to search for traces that are relevant to the business processes and filter by error state or response time.
- Understanding which infrastructure components support a business process and any changes in those components.
- Observe in real time that a business activity is dropping volume and there is no underlying IT issue.

Market Statistics

- 250k average cost of application downtime per hour.
- 77% Business and IT disconnect results in significant cost.
- 89% aligning Business & IT significantly improves decision making

Differentiators

- **Only business-aware observability product in the market**- Competitors only treat BPM as Java EE or .NET apps.
- **Leverages IBM install base with out-of-the-box support for IBM BAW and IBM BAMOE**- >1,700 IBM existing customers.
- **Supports third-party business systems**- IBM BAM, IBM BAMOE and Camunda.

Current and Future Support

- Currently supporting IBM BAM, IBM BAMOE and Camunda but up next: **Pega** support and expanding to ERP systems (e.g., SAP).
- Now support is **only in Instana SaaS**, with support for self-hosted Kubernetes back-end planned for Q4/2023.

(Add on) Logs in Context

IBM Instana Logs Pricing

- **IBM Instana Observability – Logs in Context will be a separate “add-on”**
 - To IBM Instana Observability Essentials and/or IBM Instana Observability Standard
 - This is an industry standard for logging
- **SaaS**
 - Pricing is based on data consumption and retention (industry standard)
 - The customer must decide on their entitlement for each of 30, 60 and/or 90 days of log retention
 - Currently, log retention can be by Tenant Unit
 - Entitlement is purchased in units of 1,000 Gb per month
 - Overage charged in units of 10 Gb per month for each retention period
- **Self-Hosted**
 - The self hosted license will include Logging for on prem with both Essentials and Standard licenses, and NO add-on will need to be purchased.

IBM Instana Logs Pricing - SaaS

Part Number	PID Name	Price
DORL4ZX	IBM Instana Observability Logs in Context Add-on 30 days retention 1000 GB per month	\$371.00
DORL8ZX	IBM Instana Observability Logs in Context Add-on 60 days retention 1000 GB per month	\$445.00
DORLCZX	IBM Instana Observability Logs in Context Add-on 90 days retention 1000 GB per month	\$519.00
<i>Add-on On Demand Overages</i>		
<i>DORPWZX</i>	<i>IBM Instana Observability Logs in Context Add-on On Demand 30 days retention 10 GB per month</i>	<i>\$4.35</i>
<i>DORPXZX</i>	<i>IBM Instana Observability Logs in Context Add-on On Demand 60 days retention 10 GB per month</i>	<i>\$5.34</i>
<i>DORPYZX</i>	<i>IBM Instana Observability Logs in Context Add-on On Demand 90 days retention 10 GB per month</i>	<i>\$6.23</i>

IBM Instana Logs Pricing - Subscription (On-Prem)

Instana Logs for on-prem is now included as a part of both Essentials and Standard Licenses and DO NOT REQUIRE and add-on to get access.

List of parts retired - <https://www.ibm.com/docs/en/announcements/program-withdrawal-select-part-numbers-instana-observability-no-replacements>

Steps to get access are the following:

How to get access :

1. **New customers:** Get access by default when new license is being provisioned.
2. **Existing customers:** Existing customers need to follow a 2 simple step process to get access to the complete Logging feature set:
 1. Customers need to open a support ticket at: https://www.ibm.com/mysupport/s/?language=en_US with the ticket Title starting with 'Instana: Logs-in-context access for self hosted...'
 2. Once the support ticket is created, someone from the Instana PM team (@della.lenz FYI) will reach out once the license has been updated to now include logging and the steps to enable the feature.

For queries related to considerations before activating the feature (such as sizing considerations), please reach out to PM –Logging (Mary.Reni.Rajaian@ibm.com) and for license related issues, please reach out to Della (della.lenz@ibm.com)

IBM Instana Observability

(Add on) Synthetic Monitoring

IBM Instana Managed Points of Presence (1000 RUs)

- **Who needs it?**

- Organizations needing early detection of performance and availability issues in critical user flows , especially those with globally distributed users, frequent deployments, or complex third-party dependencies. This includes companies that must ensure consistent uptime and responsiveness across key digital touchpoints, even before real users are impacted.

- **SaaS**

- Synthetics Monitoring is by default included in the pricing for Standard. However, the customer needs ‘Points of Presence’ to execute the tests. This part number is NEEDED only when the customer requires an IBM Hosted public PoP.
- If however, the customer wishes to use their own PoPs, this part number will not be required, and there’s not additional charge for the customer to use PoPs.

- **Self-Hosted**

- This add-on is not available/ needed for Self-Hosted

License & Pricing

New part number [DOI5PZX](#) (IBM Instana Observability Add-on Managed Point of Presence 1000 Resource Units per Month)

- Add-on to Instana license
- List price for 1 unit: \$12.7
- 1 unit entitles **1000 Resource Units (RU)** per month and allows to execute 3 different kind of test
 - 1 simple API test executed = 0.025 RU
 - 1 API script test executed = 0.042 RU
 - 1 Browser test executed = 1 RU
- **Min** quantity per month: **30**
- Available to partners
- Execute synthetic tests from multiple locations around the world, managed by Instana.
Starting at USD 0.00031 per execution

Instana will not charge for the tests executed from customers self-hosted locations

Part numbers			Resource units		API simple (1 min)		API script (5 min)		Browser tests (1.5 min)	
			Tests	Executions	Tests	Executions	Tests	Executions	Tests	Executions
381	30	30000	-	-	-	-	-	-	10	28800
					82	708480				
			27	1080000	-	-	-	-	-	-
381	30	29920	15	648000	14	120960	3	8640		

\$381 per month – 15 API simple + 14 Api script + 3 BT

License & Pricing

Simplicity

Flexibility

Stay competitive

Similar list price than DataDog

TestType	Number of tests	DataDog	Instana
API Simple	20000	\$5.00	\$5
API Script	10000	\$5.00	\$5
Browser test	1000	\$12.00	\$12.7

Note: Instana will not charge for those tests executed from self-hosted locations

Essentials to Standard Tradeup for Self-Hosted Perpetual and Subscription offerings

- **Who needs it?**
 - These trade-up options will enable clients to expand their infrastructure monitoring capability to complete observability, which provides application level performance visibility and contextual information between application, platform, and infrastructure layers, and reduces the mean time to resolution for application incidents. This will be especially beneficial to IBM Tivoli Monitoring (ITM) and IBM Tivoli Composite Application Manager (ITCAM) clients who have evolved to Instana Essential Self-Hosted and want to realize the full potential of Instana by upgrading to Instana Standard Self- Hosted.
- **SaaS**
 - Not valid for SaaS
- **Self-Hosted**
 - Valid for Self-Hosted Perpetual and Subscription

DB Marlin [WIP]

- Enablement deck : <https://ibm.seismic.com/Link/Content/DCjPpbGcXjggpGCVm2J8qc2Cq28V>

Overages

Overages will be treated as MVS overages:

Billed monthly (if overconsumption > 1000 resource units)

Same price point, \$12 per 1000 RU

The client tab on the Portal account page can be used to check consumed vs purchased RU

Overage email does not include add-ons yet – work in progress.

Customer enabled the add-on with 30000 RU by month per 12 months

- Month 1 consumption = 30000 RU – No overage
- Month 2 consumption = 30500 RU – No overage
- Month 3 consumption = 31000 RU – overage = 1000 RU = \$12
- Month 4 consumption = 25 000 RU – No overage
- Month 5 consumption = 35 000 RU – overage = 5000 RU = \$60

IBM Observability by Instana

Instana on IBM Z

IBM Observability by Instana APM on z/OS

- Why Instana on z/OS matters

- Brings Instana APM observability to mainframe app environments – *this marketplace belongs to IBM!*
- End to end observability from [mobile through mainframe in a single solution](#)
 - One solution – made up of 2 required part/PID numbers (IBM Observability by Instana distributed & Instana on z/OS)

Instana on
z/OS is
available
via **Shopz**

- You are critical to closing deals

- Z Sellers have a lot of products to sell - they do not know Instana
- Partner with z sellers to close the z opportunities
 - Helps you with attachment & traction at the account (land & expand)
 - You will get paid on the deal – existing rules (IBM plan)

Identifying the right opportunity

Reminder on what to focus on when working with your client:

- **Understand what are the key applications they want to trace** – don't expect to have 100% coverage of all flows immediately. Look for an opportunity to prove the value of the solution across a handful of application that connect into z/OS. If this is successful, we can grow our deployment in the future with other application flows
- **Ensure you have engaged the right people at the client** – who is going to be the primary user of Instana capabilities? Make sure the people who are blind to application performance on z/OS are aware of what we can show today. IBM Z subject matter experts may not be directly using the Instana UI but they may get benefit through contextual information
- **Be clear on the capabilities we support today and are in the near-term roadmap** - there is no need to oversell the capabilities or ignore the solution because there are perceived gaps. We have an aggressive roadmap over the next 12 months and will be addressing according to market priority.

You must partner with your IBM Z seller on all opportunities where Instana on z/OS is involved

IBM Observability by Instana APM on z/OS

- **Licensing facts**

- IBM Observability by Instana is **licensed by what it is monitoring**
 - On distributed platforms – count of VM's or Kubernetes Worker Nodes
 - On z/OS – total MSU's of the LPARs on which Instana does any monitoring
- Distributed Instana is not licensed or entitled for monitoring of z/OS workloads
- z/OS Instana is not licensed or entitled for monitoring of distributed workloads
- You **must sell both** Instana on z/OS and Instana distributed to ensure entitlement for the usage scenarios we support
- Selling z APM Connect does not convey Instana entitlement to act on the tracing data that it captures

New price point for Instana on z/OS in 2024

We've listened to your feedback – Instana on z/OS has a new price point effective 1/1/2024

2023 List Price: \$9150/VU

2024 List Price: \$6500/VU

Licensing terms and conditions remain the same.

When positioning an opportunity, ensure you price up both Instana (distributed) on DSW/PPA and Instana on z/OS on ESW/Shop Z to cover your customers complete estate.

It is critical that Automation and zStack sales work together on these opportunities to ensure success.

Always refer to the latest material in the Instana on z/OS Hub on Seismic to keep up to date with deliverables

([LINK](#))

IBM Observability by Instana APM on z/OS

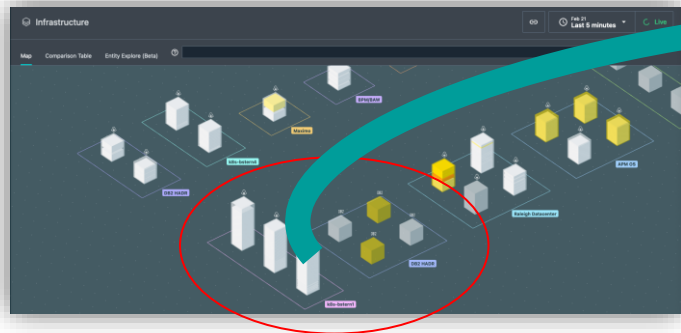

- PID numbers
 - 5698-5A1 (License), 5698-5A2 (S&S)
- Pricing
 - Execution based pricing using VUE007 table
 - Pricing based on value of providing Observability
 - License (VU): \$6,500

Quoting/Licensing example – small size

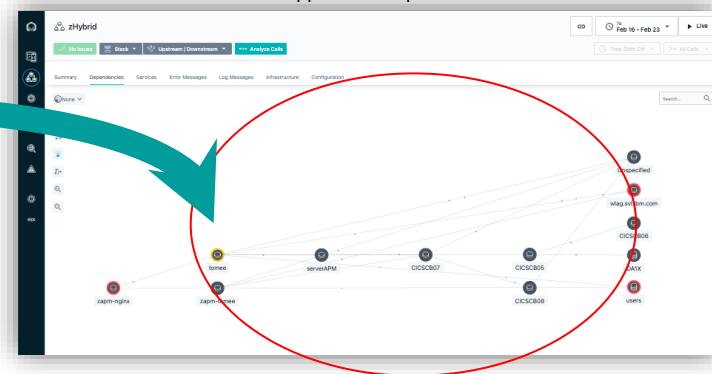

Distributed App infrastructure

- 6 Kubernetes worker nodes in a public cloud environment
- 4 Db2 servers in a virtualized on-prem environment

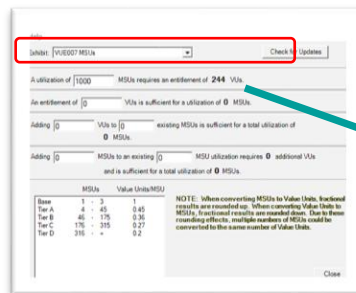

Distributed App makes calls to CICS subsystem

Instana application dependencies - dashboard

- All licensing to support z/OS based workloads must include both the distributed Instana (SaaS or self-hosted) and Instana on z/OS
- Required because the current usage scenarios we support start with a call into the mainframe from a non-z/OS based application component

Base	1	3	1
Tar A	4	45	0.45
Tar B	40	175	0.35
Tar C	175	315	0.27
Tar D	315	4	0.2

Value Unit Converter tool

- Application environment comprised of:
 - 6 Kubernetes Worker Nodes
 - 4 DB2 servers (in a virtualized DB2 env)
 - 3 IBM z/OS LPARs - total 1,000 MSU's

Quote

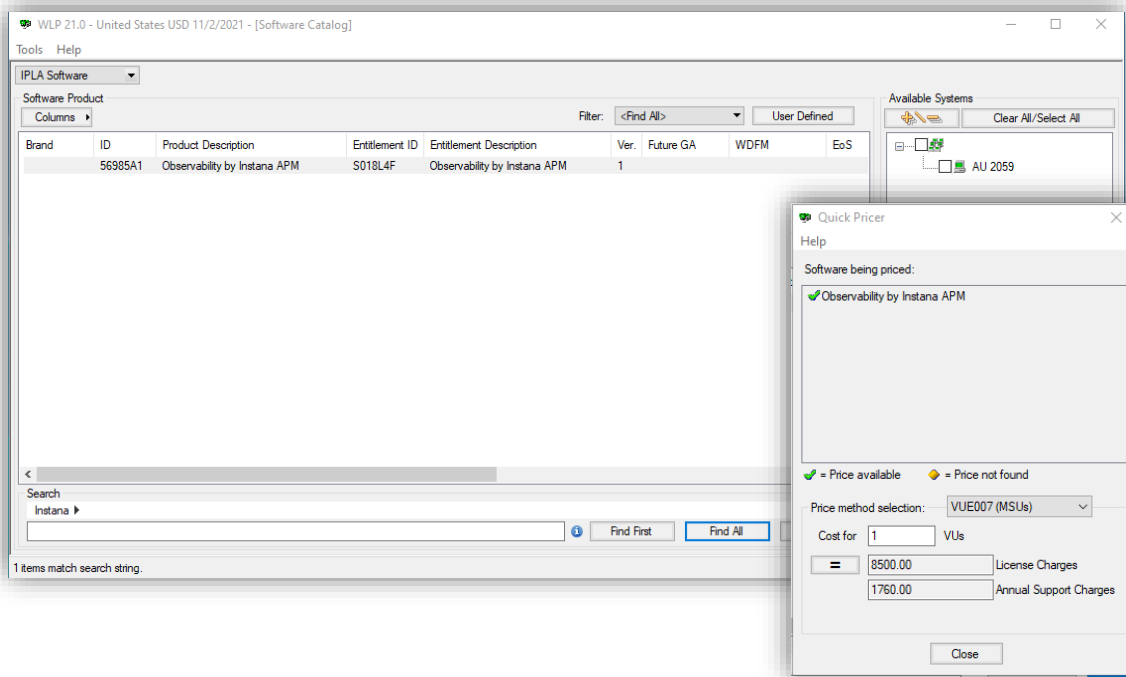

- **Distributed (Passport Advantage)**
 - 10 MVS of D29RTLL (IBM Observability with Instana Application Performance Monitoring Managed Virtual Server Subscription License)
- **IBM z (ESW)**
 - 244 VU's of 5698-5A1 and of 5698-5A2 (IBM Observability by Instana Application Performance Monitoring on z/OS)

IBM Instana on z/OS

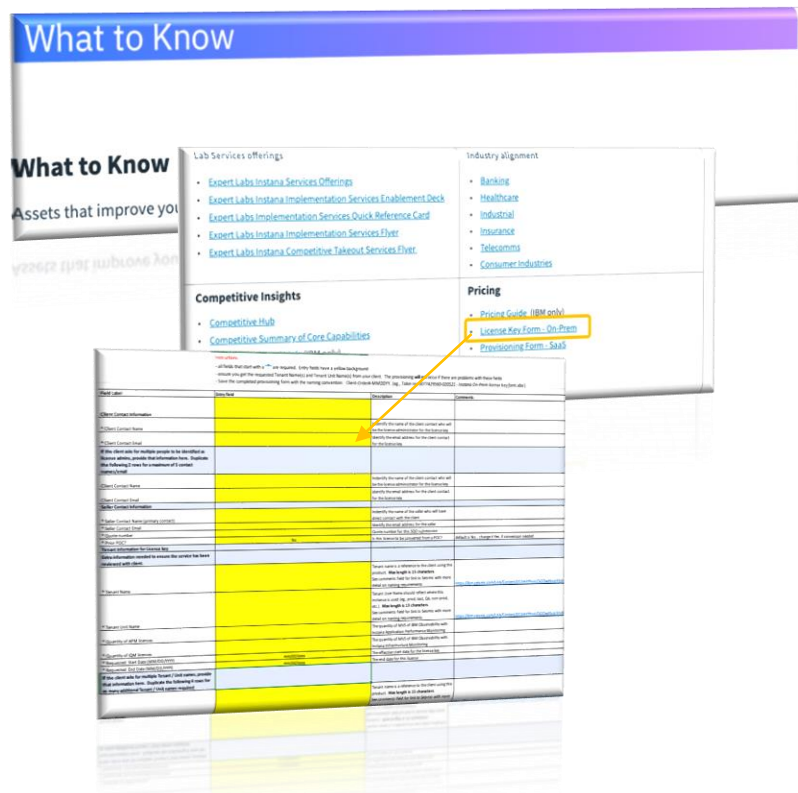

Workload Pricer – updated to include Instana on z/OS

- Workload Pricer runs on Windows
- Download from <http://wlpricer.ibm.com/wlpricerhome.html>
- Pricing based on VU's (not hosts). You must partner with the account's z Seller to submit quote & order

IBM Instana on z/OS – Submitting the Order

- **Activation Key creation**

- Temporary key included in ESW download
- Permanent activation key is based on Tenant & Tenant Unit names
- Download Activation Key creation form from Seismic – [link](#)
- Guidance doc for choosing tenant/unit names: [link](#)

- **Send completed Activation Key form to:**

- Maria Elena Taglieri (maria_elena.taglieri@it.ibm.com)
- Chris Walker (crwalker@us.ibm.com)

- **Note:** the permanent Activation Key will not be sent to the client until the Activation Key creation form is received
- On-prem Project Office will reach out to the seller to get the form
- Seller will have to contact client if there are issues with the Tenant/Tenant Unit names

Instana on z/OS opportunities

To ensure you have a valid configuration, before we close Instana on z/OS deals:

- Pricing is updating the 'checkfile' to say all deals must be first validated by Chris Walker
 - Provides a 'L0' review, before a deal gets booked
 - Focus is on ensuring the right z/OS PID numbers and distributed part numbers are being quoted

IBM Instana – Tenant & Unit naming

- Instana's architecture is based on the concept of tenants and units (referred to as environments)
- A *tenant unit* belongs to one Tenant. As changing these names has some implications on the subscription, the naming must be considered before setting up an environment

Naming rules:

- **Tenant**
 - The **tenant name** should contain a reference to the client / company using Instana. (e.g. mycompany or bigcomp). Be aware that the name can only be used once.
 - Max length: 15 characters
 - **SaaS only:** you need to pick a deployment region for the SaaS offering. Latency can be 10x faster if the tenant is deployed close to the customer. Currently, there are 2 deployment regions: EU and US. We utilize US for everything non-EU.
- **Unit**
 - The **tenant unit name** (on the Instana Portal, tenant units are called "environments"). The name should reflect the area where Instana is used (e.g. prod, non-prod).
 - Max length: 13 characters
 - **Please note:** do not use POC as the unit name, as the client will want to change this at the end of the POC. Renaming of units and/or tenants is not possible!
 - The naming structure of SaaS instance is always:
 - <https://<<TENANTUNIT>>-<<TENANT>>.instana.io>
- **Additional Information:**
 - Tenant names are unique across the entire Instana client base, which is why validation is required before a SaaS subscription is provisioned, and before a permanent key is issued for on-prem
 - If you need to switch the deployment type (SaaS / On-prem), you need to create a new tenant with a new unit. Production data cannot be carried over.
 - For the SaaS offering, the deployment region applies to the **tenant**, so all environments of a tenant will be on the same deployment region.
