Clarifying Vault Enterprise 2.0

What it **IS**...

- It **IS**
 - A regular release of Vault Enterprise
 - Vault's first release under IBM's ERA versioning model
 - The first release that supports a new licensing model

What it **ISN'T**...

It **ISN'T**

- A required replacement from the client-based licensing
- Forcing your customer to change to a new licensing model

Vault 2.0

Secure more, simplify more, modernize faster

Aubrey Johnson
PMM Manager

Faster time to secure adoption

Challenge:

Security rollouts stall when teams have to build their own integrations. The tools don't talk to each other, setup is manual and every environment needs custom architecting.

Solution:

SCIM support, public CA integration, and UI improvements mean Vault slots more naturally into the infrastructure customers already have without requiring custom connectors.

Benefit:

Users can adopt secure workloads faster because Vault fits naturally into the tools and platforms they already use.

Features:

SCIM Support (public preview) connects Vault to Okta, SailPoint, IBM Verify, and SCIM compliant IdP automating user and group lifecycle without manual syncing.

Public CA integration brings publicly trusted certificate management into the same Vault workflow as private PKI.

UI updates include a guided setup wizard to help teams get up to speed faster.

Lower operational complexity and risk

Challenge:

Manual security work compounds and each hand managed process (identity, credentials, certificates) adds overhead and introduces a place where something can drift, expire, or get misconfigured.

Solution:

Vault 2.0 automates the highest-risk manual processes meaning less manual management and intervention resulting in a security posture that holds up at scale.

Benefit:

Users can reduce manual work, lower the chance of misconfiguration, and improve security posture at the same time.

Features:

Local account password rotation gives platform teams central credential control without shared passwords or runbooks.

Workload identity federation for secrets sync replaces static IAM keys with short-lived tokens across AWS, Azure, and GCP, cutting rotation overhead.

LDAP secrets engine adds fine-grained rotation control without requiring maintenance windows.

Modernization without compromise

Challenge:

Moving to cloud is only part of the picture, most organizations continue to have hybrid infrastructure and security has to work across their entire environment.

Solution:

Vault 2.0 helps customers apply consistent patterns for secrets, identity, and certificate management across all of their environments.

Benefit:

Users can modernize security practices across their environment without having to manage separate models for every platform.

Features:

SPIFFE secrets engine lets workloads get short lived, verifiable JWT SVID identities directly from Vault and replaces long-lived tokens with automatically rotated ones.

In-place/edge envelope encryption SDK enables data to be encrypted without moving files to the transit secrets engine while Vault still manages the keys centrally.

Enhanced Kubernetes and Terraform integrations ensure secrets management stays consistent with how infrastructure is provisioned.

PMM

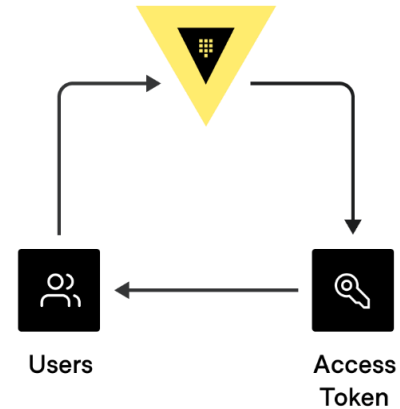

The client challenge

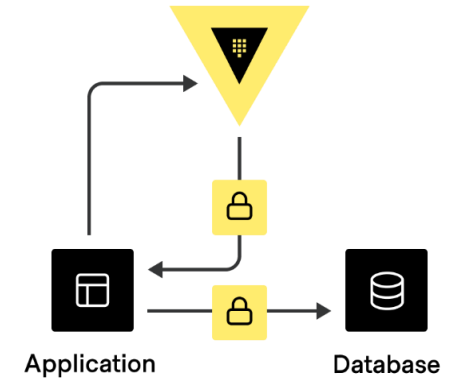

Challenges

- Little differentiation regardless of use case
- Risk of count inflation only resolved with resource-heavy reconciliation
- Potential for inflated costs that can limit growth or Vault expansion

User Workflow

Application Workflow

Simplified packaging structure

Installs (clusters)

- Platform **Standard** includes all features except KMIP.
- Platform **Standard incl. KMIP** is a Prod Install + KMIP
- Production entitlement allows DR without separate entitlement.
- Non-production install does not include DR (can purchase).

Resource units

- Single entitlement for all the things Vault does: store secrets, issue certs, etc.
- Monthly counting: usage resets at midnight on the first of each month.
- Vault usage converts to RUs according to a ratios table.

Benefits of aligning pricing to modern security

Greater flexibility, enterprise scale, and predictable growth as Vault adoption expands

Enterprise scale

More than applications:

- Machine-to-machine authentication
- Cloud-native workloads
- AI-driven and agentic workloads

Flexibility and choice

Expansion of pricing options:

- Align pricing to operations
- Incremental adoption
- Support for diverse deployment models
- Enable emergent use cases

Planning for growth

As adoption expands supports:

- Enterprise-wide standardization
- Scaling of non-human identity
- Predictable growth aligned to usage

Product milestones

Vault 2.0.0 (April 14)

- Usage counters for all current major use cases
- Census telemetry and Sigma dashboard for all usage counters
- API access to current-month and previous-month data

Vault 2.0.1 (mid-May)

- Usage counters for new Vault use cases plus ID tokens and GCP KMS
 - Local accounts, public CA certs., SPIFFE JWTs
- API access to 3 years of data (go-forward only)
- UI dashboard for customers on the new model

Later (Q4/Q1)

- Usage attribution to namespaces and mount paths
- Customer access to RU (entitlement metric) usage data
- Cross-cluster usage data aggregation
- Secrets inventory reporting (e.g. unused secrets)

Monitor usage in new Sigma dashboard

Easier deal sizing and proactive usage monitoring

- Reports all Resource Unit usage metrics running Vault 2.0+ clusters.
- Shows overall monthly consumption, with breakdowns by cluster and resource type.
- Overlays customer entitlements (if applicable) for easy monitoring of underconsumption risk and proactive right-sizing conversations.
- [Link to dashboard](#)

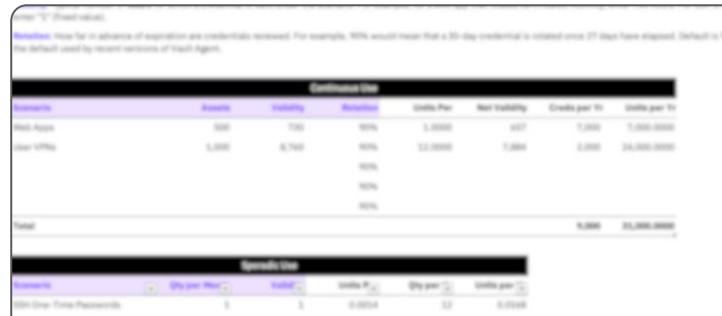

Estimate RUs with the sizing calculator

Resource units

Calculate “bottom line” RUs needed for all Vault use-cases, including buffers and monthly licenses for usage peaks.

Estimators

Frameworks for estimating Resource Units needed for PKI, SSH, Transit, and Transform.

Data sources

Guidance on data sources for brownfield opportunities and sizing for greenfield opportunities.

IBM Vault Self Managed Platform Standard - Parts

Product Name	Part Number	List Price (Monthly)*	Annual SRP Price *	Part Type
IBM Vault Self Managed Platform Standard Non-Production Install FLEXIBLE SUBSCRIPTION LICENSE	D155GZX	\$4,000	\$48,000	Install
IBM Vault Self Managed Platform Standard Non-Production Install Advanced Support Subscription Lic	Z155GZX	\$600	\$7,200	Advanced Support
IBM Vault Self Managed Platform Standard including KMIP Install FLEXIBLE SUBSCRIPTION LICENSE	D155LZX	\$30,000	\$360,000	Install
IBM Vault Self Managed Platform Standard including KMIP Install Advanced Support Subscription Lic	Z155LZX	\$4,500	\$54,000	Advanced Support
IBM Vault Self Managed Platform Standard Resource Unit FLEXIBLE SUBSCRIPTION LICENSE	D15FKZX	\$4.00	\$48.00	Resource Unit
IBM Vault Self Managed Platform Standard Resource Unit Monthly License	D15FNZX	\$4.00	\$48.00	Resource Unit

Product Notes:

PID: 5900BJF

Available to quote 4/10/2026

Requires:

- IBM Vault 2.X release or later
- Customers must adopt census reporting
- FSL entitlement minimum term of 1 year

Vault Platform pricing may NOT be combined with legacy editions. Resource Units may NOT be combined with Clients RVU

Includes IBM Standard Support

Available in Standard edition

Minimum purchase: (1) Production Install to purchase Resource Units or Non-Production Install.

Monthly License Supplement for Resource Units may be sold for max 3 months for short term increase in Rus

No tiers and no volume discounting.

KMIP install includes production install and KMIP functions – you do not need a separate production install when using the Install with KMIP

*** Price Example for training only. Use CPQ for quoting, partner and regional pricing to verify price points.**

Pricing subject to change. CPQ Quotes are valid for a limited time only. Any discrepancy between training and CPQ, CPQ is the source of truth

IBM Vault Self Managed Platform - Resource Unit

Resource Units (RU) - monthly usage by use case

RUs are audited against the total monthly usage entitlement consumed **including** RUs used in Non-Prod Install(s)

Usage counts reset monthly at midnight the first day of each month.

RU not used in a month are forfeited

Customers do not entitle specific use case RUs; usage may vary month by month provided customer does not exceed their total monthly entitlement of Rus

Discounting is at the RU level and may not be changed by use case or Install

Resource Unit	Measures	How is it counted?
Static secrets	How many things you store	Unique secrets (monthly high-water mark)
Dynamic / Auto-rotated	How many roles you manage	Number of roles configured
PKI	How long certs live	Duration-adjusted cert units (730 hours = 1 RU)
SSH	How long SSH creds live	Duration-adjusted SSH units (730 hours = 1 RU)
Transit / Transform	How many items you secure	Data-protection API calls (per element) 150,000 = 1 RU
KMSE	How many keys you manage	Managed keys (monthly high-water mark)

Sales Recommendation: *sell additional RU entitlements more than current usage to allow for expansion, projects, short term workloads, or testing of new use cases*

IBM Vault Self Managed Platform – Quote Guidance

IBM discountable parts

What parts may be discounted?

Each part may be authorized at separate discounts level up to the self managed product discount approval authority.

Resource Units (RU) are discountable, and the same discount applies to all RUs.

The RU discount cannot change by use case, nor by Install.

Resource Units

Production Install(s)

Monthly License – for short term RU needs may be used for a max of 3 Mos

KMIP Production Install(s)

Non Production Install(s)

Custom Plug In(s)

Quotes must include

Minimum:

1 Production Install

Resource Units entitlements evaluated monthly includes IBM Standard Support

Optional Parts

Advanced Support

Custom Plug in Install

KMIP Install replaces Production Install, add KMIP functionality to a Prod Cluster

Non-Production Install – usage is counted against entitlements

Decision Framework

[Seismic Link](#)

Renewal date > 6 months away

We **DO NOT** recommend introducing the new licensing model yet.

Reasoning: Allow time for early implementation learnings, operational feedback, and quoting refinement before presenting the model broadly to the install base.

Recommended action(s):

- Maintain the current commercial structure & revisit when the renewal enters six-month window.
- Encourage customers to adopt Vault 2.0.0+.
- Encourage customers to remove unused secrets.
- Encourage customers to share utilization with Census (Automatically or [manual](#)).

New Customer OR Renewal date < 6 months away

Prerequisites

- Vault Self-Managed 2.0.0+
- Shared utilization with Census (Automatically or [manual](#))

Early adopter caveats

- Conversion of usage metrics to RU's
- Reporting will be cluster wide. Namespace and mount attribution and historical data retention
- Both targeted for Q4 2026

Reasoning: Utilization reporting is required for accurate accounting of consumption. The added reporting needed is included with Vault Self-Managed 2.0.0+

Recommended action(s): Use the [Vault – Resource Unit Pricing Estimation and Technical Discovery](#) guide to aid in sizing and recommendations.

Vault - Resource Unit Pricing

Estimation and Technical Discovery Guide

APPROACH

Estimating activity for the new pricing model is not about arriving at a perfectly precise number, and it is not a one-size-fits-all exercise. Every customer environment is different, with unique architectures, technologies, and growth patterns that influence how secrets, certificates, and security operations are consumed.

Rather than relying on a fixed checklist of questions, sellers should approach estimation as a guided discovery conversation. The goal is to understand how the customer's applications, platforms, and automation interact with Vault anch those

GUIDE

-
-
-

IBM Vault - Resource Unit Pricing

Selling Guide

EXECUTIVE SUMMARY

Vault Enterprise now supports a new business model that aligns cost with measurable consumption activity across secrets, certificates, key management, and data protection operations. This model:

- Aligns pricing with automation and machine identity growth
- Improves predictability for economic buyers
- Removes structural inflation caused by replication and ephemeral workloads
- Supports broader enterprise standardization
- Flexibility for shifting workloads

This is an additional pricing option. The [client-based pricing](#) remains available. See the Vault Enterprise [feature matrix](#) for about features by package.

PRICING FRAMEWORK

Metric Type	Price Metric	Frequency	Considerations
Transaction	Transaction Fee	Monthly. Subject to	• Customers will be charged per installation (cluster). • Disaster recovery (DR) replication will be included with each

Ongoing support

Support framework

- Enablement material
- eLearning
- Slack channel - [#vault-relicensing-support](#)
- [AMA](#) 4/24/26
- Office hours form to be launched

Office hours criteria

- Renewal $\leq$ 6 months
- Version 1.16 - current
- Sharing usage data via Census
 - Or willing to share results of the Vault Licensing Operator
- Completed eLearning
- Willingness to upgrade

Thank you
